

Cybersecurity

Real Protection. Flexible Models. Recurring Revenue.

Why Integrators Can't Ignore Cybersecurity

The moment you power up a client's network, you share the liability. If a breach happens and you never offered protection, you're the first call—and sometimes the first name in a lawsuit.

That's why savvy integrators now include **Cyber Protect** in every network and service-plan quote. Clients can still opt out, but the offer (and waiver) shifts risk off your shoulders.

Bottom line:

 Protect **your business** from breach blame.

 Protect **your client** from real-world threats.

 Protect **your revenue** with monthly RMR.

Why Your Clients Need Managed Cybersecurity

1. **Smart-device sprawl:** Every thermostat, lock, and camera is a new attack point.
2. **Basic firewalls fail:** Malware, phishing, zero-days slip past entry-level gear.
3. **Built-in tools (Nord, Defender, McAfee) encrypt traffic but don't block malware or exploits.**

What SpecOp Cybersecurity Delivers

Cyber Protect

Core, Always-On Defense

-  **Network segmentation** Guests, IoT, and security cams each in their own safe lane
-  **Strong firewall rules** Cloud-managed firewalls stop intrusions—not the “out-of-box” defaults
-  **Endpoint Detection & Response (EDR)** Real-time threat blocking on every device—phones, PCs, controllers
-  **Credential & access control** Unique logins, role-based permissions, no shared passwords
-  **Monitoring, visibility, and remote support** 24/7 SOC eyes on the network—we see issues and fix them before your client notices

Cyber Protect +

Concierge-Level Security

Built for estates, execs, and high-compliance projects. Can include:

-  **24/7 SOC oversight** Human analysts monitor and act in real time
-  **Incident response** Rapid containment and forensic reporting
-  **AI-powered SIEM & threat hunting** Uncovers hidden threats others miss
-  **Pen testing & phishing simulators** Proves defenses and trains users
-  **Executive privacy & travel security** Data-broker removal and secure on-the-road connectivity

Start every client on Cyber Protect and upgrade to Cyber Protect + when risk or compliance demands grow—no hardware swap required.

What You—and Your Clients—Get

✓	✓	✓	✓	✓
Always-on protection — threats blocked before clients notice	Integrated with the network — no vendor finger-pointing	Tiered service — start core, upsell concierge as risk grows	Built-in RMR — monthly revenue on every install	Less firefighting — more billable hours, happier techs

Why Integrators Work with SpecOp

Designed by Engineers

Network and security specialists build every deployment right the first time.

In-House NOC (Network Operations Center) + Incident Response Team

We don't hand over a design and walk away. Once the system is live, we help you fine-tune performance—power levels, interference, and rogue APs included.

Real RMR Models

Cyber Protect tiers, NaaS, HaaS, Cellular DAS as a Service—choose, bundle, scale.

Unlimited Remote Support

Issues resolved proactively, often without even needing to roll a truck.

Boost Client Trust

Reliable, secure systems mean fewer panicked calls and longer-term relationships.

Proven, Trusted Partner - 20+ Years Securing Custom-Integration Networks

Predictive Wi-Fi design helps you stop selling access points—and start delivering performance.
