Cybersecurity

Real Protection. Flexible Models. Recurring Revenue.

SpecOp Secure

Why Integrators Can't Ignore Cybersecurity

The moment you power up a client's network, you share the liability. If a breach happens and you never offered protection, you're the first call—and sometimes the first name in a lawsuit.

That's why savvy integrators now include **Cyber Protect** in every network and service-plan quote. Clients can still opt out, but the offer (and waiver) shifts risk off your shoulders.

Bottom line

Protect **your business** from breach blame.

Protect **your client** from real-world threats.

Protect **your revenue** with monthly RMR.

Why Your Clients Need Managed Cybersecurity

01
Smart-device sprawl: Every thermostat, lock, and camera is a new attack point.

02
Basic firewalls fail: Malware, phishing, zero-days slip past entry-level gear.

03
Built-in tools (Nord, Defender, McAfee) encrypt traffic but don't block malware or exploits.

What SpecOp Cybersecurity Delivers

Cyber Protect
Core, Always-On Defense

Includes:

Endpoint protection — Security software that blocks attacks on computers and servers in real time.

Password vault — Secure vault for credentials with controlled sharing and rotation.

Dark-web monitoring — Alerts if logins appear on criminal sites.

Credential & access control — Unique accounts, role-based permissions, provisioning/deprovisioning, and MFA/passkeys to limit who can do what.

Secure remote access (VPN / SASE) — Encrypted connections for home, office, or travel to keep remote sessions safe.

Incident response access — Direct line to our incident team and prebuilt playbooks.

Quarterly remote risk scans — Regular checks for unpatched devices and weak settings, with remediation guidance.

Awareness training — Short, targeted sessions for family and staff to reduce risk from phishing and scams.

Cyber Protect +
Concierge-Level Security

Everything in Cyber Protect, plus optional upgrades for estates, executives, and high-compliance projects:

Email domain protection & encryption — Deters impersonation of client email addresses and encrypts sensitive outbound messages when required.

Identity management with MFA & passkeys — Adds multi-factor authentication and modern passkey options on top of centralized account control.

Mobile threat defense — Shields phones and tablets from malware, phishing, and unsafe Wi-Fi.

24/7 threat monitoring (MDR) — Security operations team watches the network around the clock, detects threats, and responds as needed.

Activity logging & analysis (SIEM) — Collects and reviews system activity to identify suspicious or hidden patterns.

Continuous posture improvement — Monthly adjustments and targeted hardening to close blind spots before they're exploited.

Data privacy & data broker removal — Removes or reduces personal data exposure on broker sites and deletes compromised records when possible.

On-site assessment — In-person review of homes, offices, and networks with a consolidated findings report.

Data loss prevention (DLP) — Controls and blocks sensitive files, emails, and exfiltration attempts.

Attack surface scanning — Continuous checks of cloud accounts, web apps, and services to find exposed vectors and misconfigurations.

Start every client on Cyber Protect and upgrade to Cyber Protect + when risk or compliance demands grow—no hardware swap required.

What You—and Your Clients—Get

SpecOp Secure

✓ **Always-on protection—** threats blocked before clients notice

✓ **Integrated with the network—** no vendor finger-pointing

✓ **Tiered service—** start core, upsell concierge as risk grows

✓ **Built-in RMR—** monthly revenue on every install

✓ **Less firefighting—** more billable hours, happier techs

Why Integrators Work with **SpecOp**

Designed by Engineers

Network and security specialists build every deployment right the first time.

In-House NOC (Network Operations Center) + Incident Response Team

24/7 monitoring, proactive defense, and live incident response.

Real RMR Models

Cyber Protect tiers, NaaS, HaaS, Cellular DAS as a Service—choose, bundle, scale.

Unlimited Remote Support

Issues resolved proactively, often without even needing to roll a truck.

Boost Client Trust

Reliable, secure systems mean fewer panicked calls and longer-term relationships.

Proven, Trusted Partner - 20+ Years Securing Custom-Integration Networks

20+ years protecting luxury homes and commercial sites—we know what breaks and how to fix it.

Let's Secure Every Install—Together.

Breach-proof systems, recurring revenue, zero guesswork.
Bring us your next project and see how Cyber Protect fits.
